2nd Annual Prostate Cancer Awareness Fundraising Dinner

Host
LYDIA BORGATTA
Director and Relationship Manager in the Private Bank
Credit Suisse New York

Thursday, September 27, 2012

Program

Cocktails & hors d’oeuvres 6:30 pm
Dinner 7:00 pm
Keynote Speaker Alan W. Partin, M.D., Ph.D.
Chairman, The Brady Urological Institute
Q&A Session

Credit Suisse New York
11 Madison Avenue
New York, NY

Please RSVP by September 17th, 2012
Call 410-955-8434

Reply Card enclosed
KEYNOTE SPEAKER

Breakthrough Research
From the Brady Institute

ALAN W. PARTIN, M.D., PH.D.
David Hall McConnell Professor of Urology and
Chairman, The Brady Urological Institute

The Partin Tables, which can predict with 95% accuracy a man’s likelihood of being cured by treatment, have benefited tens of thousands of men worldwide. Today, Dr. Partin’s laboratories and clinical and surgical interests are focused on the development and testing of new and existing methods for predicting the aggressiveness of prostate cancer so that the best treatment decisions can be made by both the patient and his physician.

Hear Dr. Partin’s assessment of what’s made the Brady Urological Institute the #1 Urology Department in the country for over 2 decades. As he leads the Johns Hopkins Prostate Cancer Team into the future—and as the intersection of medicine and technology become more intertwined—get an inside look at the discoveries being made in prostate cancer research, treatment and outcomes.

NEW METHODS TO TEST PROSTATE CANCER AGGRESSIVENESS

ELIZABETH A. PLATZ, ScD., M.P.H.
Professor and Martin D. Abeloff, M.D. Scholar in Cancer Prevention

Dr. Platz is a leader in the field of cancer epidemiology and is recognized for her leadership of multidisciplinary prostate cancer research teams. A major focus of her work is the use of molecular and genetic epidemiology approaches to understand the mechanisms underlying prostate incidence and progression. She conducts her work with an eye toward translation of findings into prevention and treatment strategies. She is at the forefront of epidemiologic research on the role of inflammation, a target for prevention, in the development of prostate cancer, and on telomere length as a prognostic marker for poor outcome after treatment for prostate cancer. Her work, which often sits at the interface between the population and basic sciences, is enhanced by the rich intellectual environment of multidisciplinary collaboration at Johns Hopkins.
Each year, research proposals from our best and brightest scientists—from departments including Oncology, Pathology, Medicine, Mechanical Engineering, Radiology, Urology, School of Public Health—are submitted to a committee of faculty, scientists and Johns Hopkins Prostate Cancer Advisory Board members. The committee reviews the proposals and awards annual support. This funding provides the investigator with valuable preliminary data to use when applying for continued funding from agencies like the National Institutes of Health.

Johns Hopkins Prostate Cancer Team

The Johns Hopkins Prostate Cancer Team utilizes a multi-disciplinary approach to treating prostate cancer. It involves close collaboration between the urologist, oncologist, and radiation oncologist to deliver the best science, the best treatment and the best outcome for the patient.

The Best

Science • Treatment • Outcomes
Yes, I want to support The Johns Hopkins Prostate Cancer Team!
